

Cobane Code Review Audit Summary - Review #2

Generated automatically by Cobane AI Code Review Assistant

Detected Findings & Recommendations:

- (1) Line 14: [PERFORMANCE] Backtracking depth first search can be slow. Consider caching valid states or using bitmask constraints. -> Suggestion: Optimize backtracking solver with constraint propagation (e.g. tracking row/col/box sets).
- (2) Line 30: [STYLE] Consider extracting string concatenation into a join loop or cleaner formatter. -> Suggestion: Use f-string formats or ''.join() for clearer output loops.
